Project Management - Quiz 1

1. Describe in detail the mechanics of project implementation. Include a chart to visualize the implementation mechanism.
2. Describe the project management implementation process. Describe the inputs and outputs of each process!
3. What is the relationship between project management implementation and the 9 knowledge areas of project management?

Answers

1. The mechanism of project implementation start with policies declared by management. after policies have been declared, a team is assembled and a leader is appointed to lead the team in managing the project. the management then delegate the project to the project manager/leader to lead and manage the project. the management keep tabs on the project manager from their report on the project. each member are responsible to the project accordingly with their contribution.

2. project management implementation process start with initiation where they identify the problem to solve the problem. then they plan out the project as a guideline to how the project goes. they would make project plan, resource plan, financial plan, risk plan, acceptance plan, communication plan, procurement plan, contract supplier and perform phase review. next theyll execute the project as the plan said, they would deliver a physical result of the project. they would then observe and control how they execute the project. and close the project by giving the result to the project owner

-
3. 9 knowledge areas of project management is the necessity to properly implement project management. project managers must have and realized this knowledge for a project to be done right.
