# LARAVEL DATATABLE

## Practicum 3 - jQuery Datatable in AdminLTE

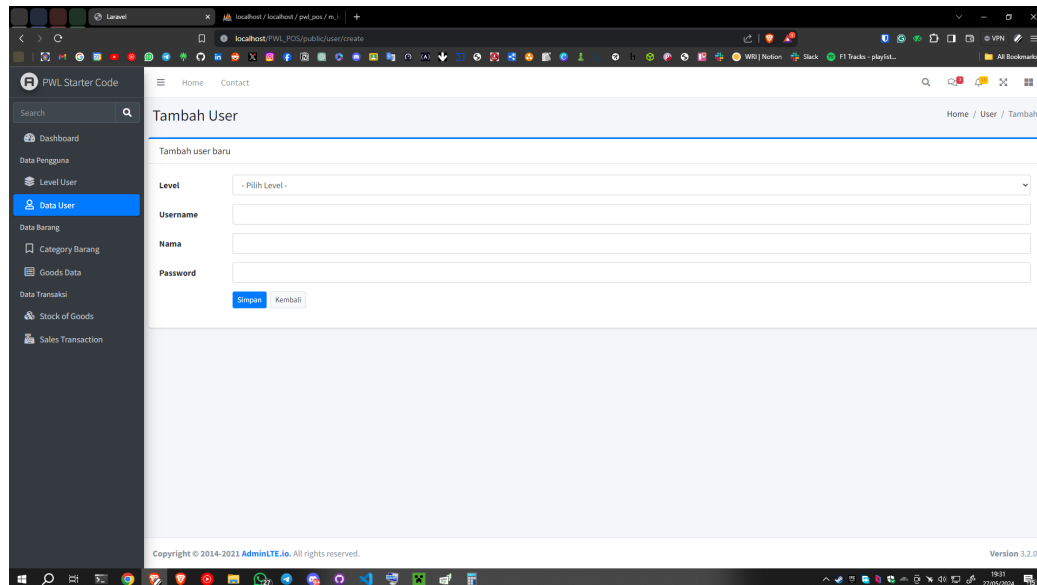

2. -

8. -

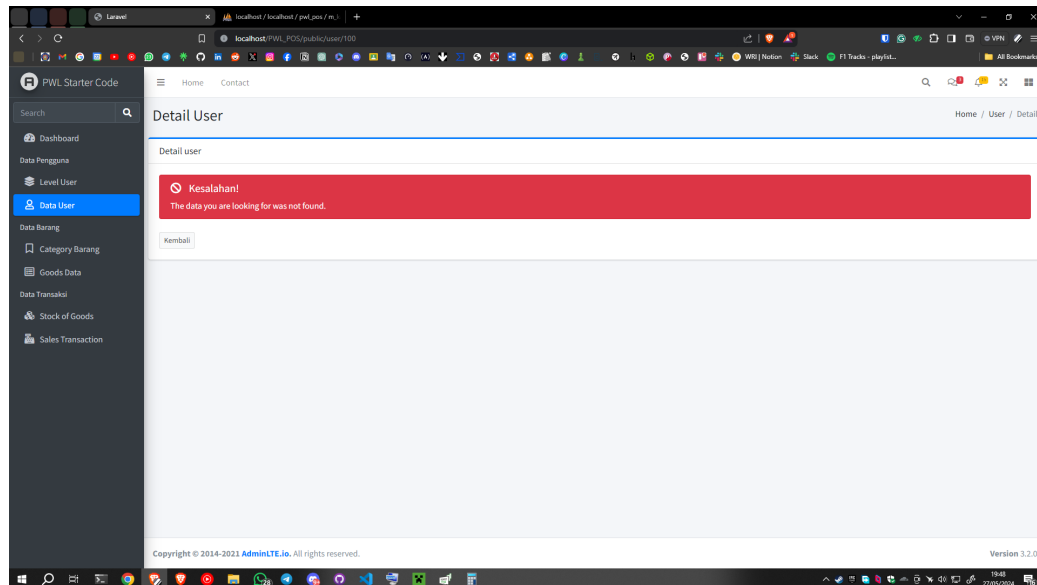

the template works but it has that one weird string

12. -

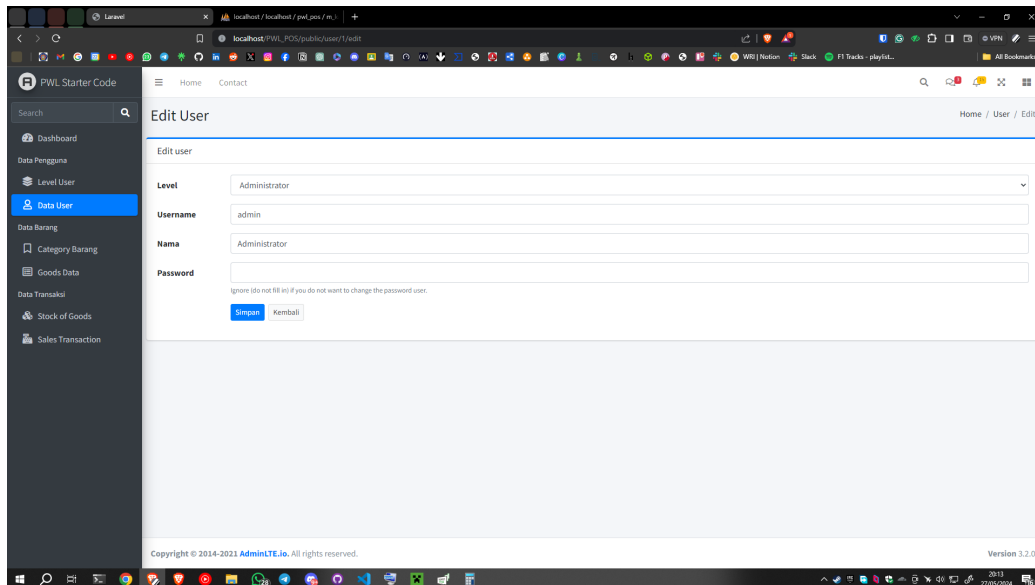

the create page looks more stylish and have a drop down menu for the level option

16. -

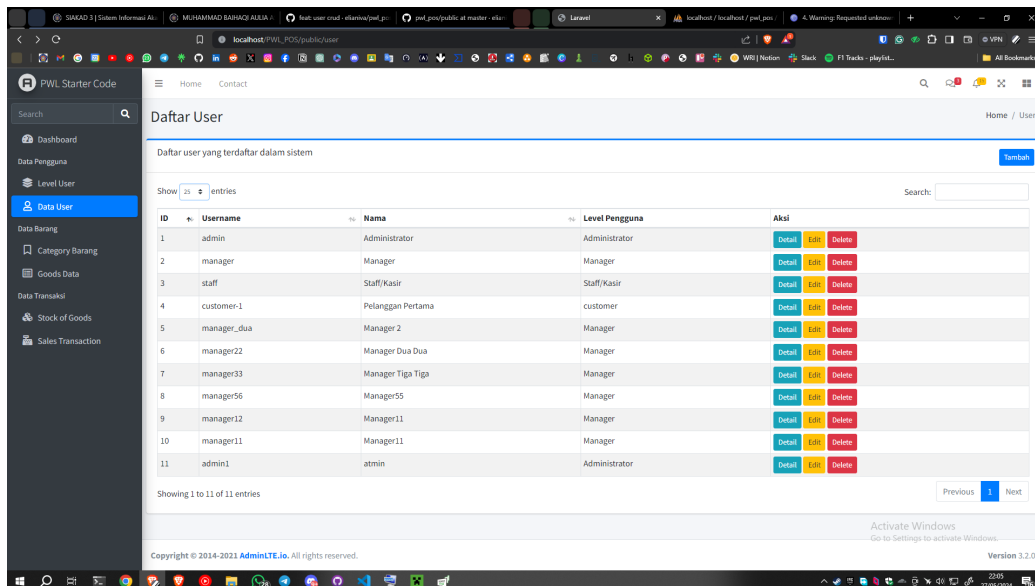

it display an error because the user doesnt exist

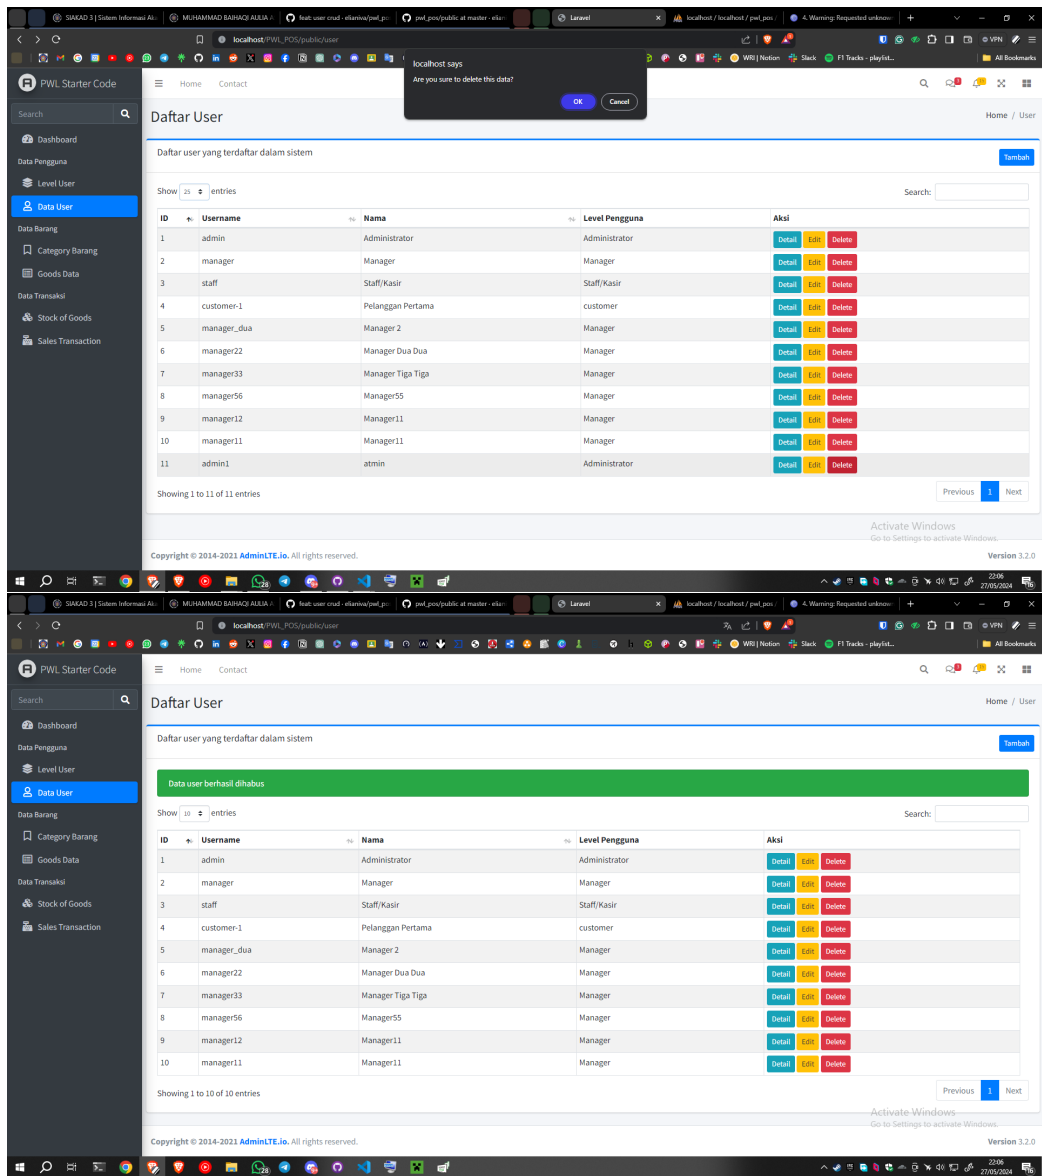

20. -

it is similar to the create page but now there is an already filled field

24. -

it confirm the decision before delete the user

---

## Question

1. different type of user and layout
2. yes, it simplify the building of a page
3. include is when you want to add a chunk of ui element that is too big to be edited in one file. extend is to use the code as a template, effectively doing copy paste without the effort to do so. section is used to, in a way, store a ui element in a 'variable' that later can be use whenever a yield component is calling the variable. a push component is used for the css and js. a yield component can call on a section to use the ui component of the section. stack is used to bundle up css and js.
4. is to indicate which sidebar nav to highlight
